

The **Straight** Truck Mounted **TM-1882**

WEBBS
Crane Rentals Ltd.

"When I was looking for an 18- to 25-ton crane, my sales rep from Coast Cranes Ltd. suggested the Tadano TM-1882 featuring a six-section boom. Expecting a poor load chart compared to a conventional boom, I was surprised that it had a better chart at various lift points than some 20-and 22-ton models. Features contributing to great maneuverability and flexibility: H-style multi-extension outriggers; short retracted boom; over 80 feet of boom without a jib; continuous rotation; and one-hand remote control. The TM-1882 was the perfect crane to compliment our existing fleet. Its performance has secured more repeat business than any amount of promotional gimmicks and has proven itself to be a tough competitor in a highly competitive market."
